

## A KAIROI HEALTH PRESS RELEASE

# KairoiOptimize™ is now “Set it and Forget it”

KairoiHealth announces an update of its KairoiOptimize tool that makes its operation truly “set it and forget it.”

Practices can now take immediate advantage of KairoiOptimize's ability to increase the number of completed encounters in each provider's day. Investing 2 hours to customize the application this week will show results next week and all the weeks following.

The onboarding process has two parts: running an appointment report from the client's athenaNet instance to inform the algorithm and noting in the user interface the providers who are targeted for enhanced scheduling.

The application then runs completely in the background, searching ahead in providers' schedules, calculating where additional slots will likely replace patients who cancel late or don't show, and then inserting those slots for backup patients ready for schedulers to book.

Kairoi's patented process will initially add 10% to the number of completed encounters. Clinicians typically achieve a 95% schedule density over time. Practice managers can generate reports to document the improvements.

COO Dave Flanagan said, “Both parts of the onboarding can be accomplished during Zoom meetings, each lasting less than one hour. The practice will see results in the first week.

“After setup, slots are added each month for the following month, always based on the most recent appointment history.”

KairoiOptimize is a SAAS solution, there is no on-site installation and after setup no staff time is required to manage it.

### AT A GLANCE

KairoiOptimize™ is a patented process that finds the pattern of late cancellations and no-shows in each provider's panel and uses this information to add slots to schedules that back-fill the gaps. Providers don't lose time waiting for patients who don't come. Their workdays flow better, reducing burnout, and patients get appointments sooner.
